1 ABOUT THIS MANUAL

1.1 Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

1.2 Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

2 SAFETY INSTRUCTIONS

WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all
 appropriate sections of this manual.
- CAUTION --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries.
 Other types of batteries may burst, causing personal injury and damage.
- Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning.
 Turning off the unit will not reduce this risk.
- 5. CAUTION Only qualified personnel can install this device with battery.
- 6. NEVER charge a frozen battery.
- For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- Warning!! Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

3 INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

3.1 Features

- · Pure sine wave inverter
- . Configurable input voltage range for home appliances and personal computers via LCD setting
- . Configurable battery charging current based on applications via LCD setting
- · Configurable AC/Solar Charger priority via LCD setting
- · Compatible to mains voltage or generator power
- . Auto restart while AC is recovering
- * Auto restart write AC is recovering
- · Overload/ Over temperature/ short circuit protection
- · Smart battery charger design for optimized battery performance
- · Cold start function

3.2 Basic System Architecture

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- · Generator or Utility.
- · PV modules

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner (1.5HP).

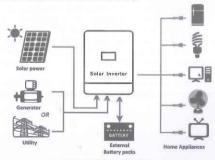

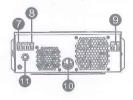

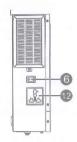

Figure 1 Hybrid Power System

- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function buttons
- 6. Power on/off switch
- 7. AC input
- 8. AC output
- 9. PV input
- 10. Battery input
- 11. Circuit breaker
- 12. Output receptacles

4 INSTALLATION

4.1 Unpacking and Inspection

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

The unit x 1

User manual x 1

U-terminal x 2

4.2 Preparation

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

4.3 Mountingthe Unit

Consider the following points before selecting where to install:

- . Do not mount the inverter on flammable construction materials.
- · Mount on a solid surface
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx.
 20 cm to the side and approx.
 50 cm above and below the unit.
- The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing two screws. It's recommended to use M4 or M5 screws.

4.4 Battery Connection

CAUTION: For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable as below.

Recommended battery cable size:

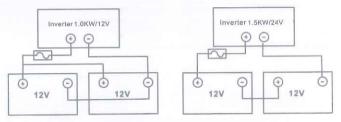

Model	Wire Size	Cable (mm²)	Torque value (max)
1.0KW 12V	1 x 6AWG	14	5 Nm
1.5KW 24V	1 x 6AWG	14	5 Nm

Please follow below steps to implement battery connection:

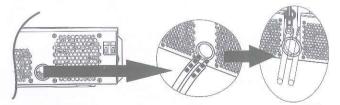

- Remove insulation sleeve 18 mm for positive and negative conductors.
- Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.

3. Connect all battery packs as below chart.

4. Insert the battery wires flatly into battery connectors of inverter and make sure the bolts are tightened with torque of 2 Nm in clockwise direction. Make sure polarity at both the battery and the inverter/charge is correctly connected and conductors are tightly screwed into the battery terminals.
Recommended tool: #2 Poil Screwdriver

 \triangle

WARNING: Shock Hazard

Installation must be performed with care due to high battery voltage in series.

CAUTION!! Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

4.5 AC Input /OutputConnection

CAUTION!! Before connecting to AC input power source, please install a separate AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 20A for 1.0KW and 20A for 1.5KW.

CAUTION!! There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

WARNING! All wiring must be performed by a qualified personnel.

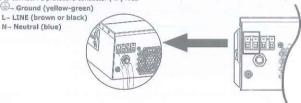

WARNING! It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

Suggested cable requirement for AC wires

Model	Gauge	Torque Value
1.0KW 12V	14 AWG	2 Nm
1.5KW 24V	12 AWG	2 Nm

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.
- Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor () first.

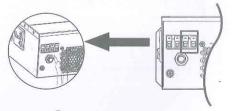

A

WARNING:

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws.

L→ LINE (brown or black)
N→ Neutral (blue)

5. Make sure the wires are securely connected.

CAUTION: Appliances such as air conditioner are required at least 2–3 minutes to restart because it' serquired to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

4.6 PV Connection

CAUTION: Before connecting to PV modules, please install separately a DC circuit breaker between inverter and PV modules.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Model	Wire Size	Torque value (max)
1.0KW 12V 1.5KW 24V	1x12AWG	2 Nm

PV Module Selection:

When selecting proper PV modules, please be sure to consider below parameters:

1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.

2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

INVERTER MODEL	1.0KW	1.5KW
Max. PV Array Open Circuit Voltage	150	Vdc
PV Array MPPT Voltage Range	20~150Vdc	30~150Vdc

Take 250Wp PV module as an example. After considering above two parameters, the recommended module configurations are listed as below table.

Solar Panel Spec. Total input SOLAR INPUT O'ty of panels (reference) (Max in serial:4ocs) power 250Wp Vmp: 30.1Vdc 2 pcs in serial 500W 2 pcs Imp: 8.3A Voc: 37.7Vdc 750W 3 pcs in serial 3 pcs Isc: 8.4A Cells: 60 4 pcs in serial 4 pcs 1000W

PV Module Wire Connection

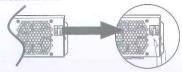

Please follow below steps to implement PV module connection:

1. Remove insulation sleeve 10 mm for positive and negative conductors.

Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.

4. Check correct polarity of wire connection from PV modules and PV input connectors. Then, connect positive pole (+) of connection wire to positive pole (+) of PV input connector. Connect negative pole (-) of connection wire to negative pole (-) of PV input connector. Recommended tool: 4mm blade screwdriver

4.7 Final Assembly

After connecting all wirings, please put bottom cover back by screwing four screws as shown below.

5 OPERATION

5.1 Power ON/OFF

Once you have made sure that all the wiring is properly connected, the machine is also connected to the battery and the switch (the switch button located on the side of the machine) is pressed to start the machine. Otherwise, even if the mains or photovoltaic power is connected, the machine will not be able to start.

5.2 Operation and Display Panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

LED Indicator

LED	Indicator		Messages
Man all man		Solid On	Output is powered by utility in Line mode.
☀AC/☀INV	Green Flashin	Flashing	Output is powered by battery or PV in battery mode
₩ CHG	Green	Solid On	Battery is fully charged.
₩- Unu		Flashing	Battery is charging.
A F	Sol Sol	Solid On	Fault occurs in the inverter.
▲ FAULT	Red	Flashing	Warning condition occurs in the inverter.

Function Keys

Function Key	tion Key Description	
ESC	To exit setting mode	
UP	To go to previous selection	
DOWN	To go to next selection	
ENTER To confirm the selection in setting mode or enter setting mode		

5.3 LCD Setting

After pressing and holding ENTER button for 3 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" button to confirm the selection or ESC button to exit

Setting Programs:

Program	Description	Selectable option	
00	Exit setting mode	Escape 00 GOE	One-button restore setting options
		(default)	
		Utility first (default)	Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.
oi′	Output source priority: To configure load power source priority	Solar first	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, utility will supply power to the loads at the same time. Battery provides power to the loads only when any one condition happens: - Solar energy and utility is not available. - Solar energy is not sufficient and utility is not available.
		SBU priority 0 I SbU	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 12.
		MKS priority 0 1_nF5_	When solar is available, solar energy and battery energy will supply power to the loads, when battery voltage drops to either low-level warning voltage or the setting point in progras 12, the utility only supplies energy to the load as a back up power. When solar is not available, utility energy wis supply power to the loads, the battery only supplies energy to the load as a back up power.

		02 ID .	05 50.
02	Maximum charging current: To configure total charging current for solar and utility chargers. (Max. charging current = utility charging current + solar charging current)	05 <u>30</u> ,	40A (default)
		02 50^	05 _ 60.
		02 _ 70 -	05 80.
03	AC input voltage range	Appliances (default) 03 RPL	If selected, acceptable AC input voltage range will be within 90-280VAC.
03		03 <u>UPS</u>	If selected, acceptable AC input voltage range will be within 170-280VAC.
	Battery type	AGM (default)	DS_FLd_
05		User-Defined OS USE	If "User-Defined" is selected, battery charge voltage and low DC cut-off voltage can be set up in program 26, 27 and 29.
06	Auto restart when overload occurs	Restart disable (default)	Restart enable
07	Auto restart when over temperature occurs	Restart disable (default)	Restart enable
09	Output frequency	50Hz (default)	60Hz 09 60 _%
10		10 550,	230V (default) 10 230V
10	Output voltage	10 240	

	Maximum utility charging current Note: If setting value in program 02 is smaller than that in program in 11, the inverter will apply charging current from program 02 for utility charger.	11 2R	10A
11		20A (default)	30A 11 30A
		11 40A	
	Setting voltage point back to utility source when selecting "MKS priority"or "SBU priority"in program 01.	1.5KW 24V default s	etting:23V
12		1.0KW 12V default s	etting:11.5V
		Setting range is from 21 model 10.5V to 13.1V fo of each click is 0.1V	0V to 26.2V for 1.5KW r 1.0KW model Increment
71	Settling voltage point back to battery mode when selecting "MKS priority"or "SBU priority"in program 01.	1.5KW 24V default s	
13		1.0KW 12V default s	
		Settling range is from 24 model 12V to 14.6V for 1 of each click is 0.1V	0V to 29.2V for 1.5KW .0KW model Increment
14	Maximum battery discharge current when	10A 	20A (default)
14	selecting "SBU priority" in program 01	NA 304	40A

		If this inverter/charger is working in Line, Standby or Fault mode, charger source can be programmed as below:		
	Charger source priority: To configure charger source priority	Solar first 16 CSO	Solar energy will charge battery as first priority. Utility will charge battery only when solar energy is not available.	
16		Solar and Utility (default)	Solar energy and utility will charge battery at the same time.	
		Only Solar 16 050	Solar energy will be the only charger source no matter utility is available or not.	
		If this inverter/charger is working in Battery mode or Power saving mode, only solar energy can charge battery. Solar energy will charge battery if it's available and sufficient.		
18	Alarm control	Alarm on (default)	Alarm off IB_60F	
19	Auto return to default display screen	Return to default display screen (default)	If selected, no matter how users switch display screen, it will automatically return to default display screen (Input voltage /output voltage) after no button is pressed for 1 minute.	
		Stay at latest screen	If selected, the display screen will stay at latest screen user finally switches.	
20	Backlight control	Backlight on (default)	Backlight off	
22	Beeps while primary source is interrupted	Alarm on (default)	Alarm off POP	
23	Overload bypass: When enabled, the unit will transfer to line mode if overload occurs in battery mode.	Bypass disable (default)	23 <u>648</u>	

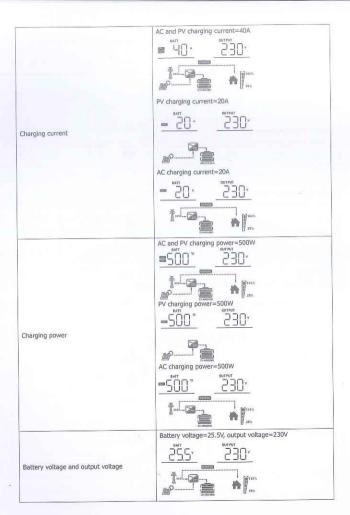

25	Record Fault code	Record enable (default) 25 FEN 25 FdS
	Bulk charging voltage (C.V voltage)	1.0KW 12V default setting: 14.1V
26		1.5KW 24V default setting: 28.2V
		If self-defined is selected in program 5, this program can be set up. Setting range is from 12V to 15V for 1.0KW 12V model and 24V to 30V for 1.5KW 24V model. Increment of each click is 0.1V.
	Floating charging voltage	1.0KW12V default setting: 13.5V FLU 27 I35Y
27		1.5kw 24V default setting: 27.0V
71		If self-defined is selected in program 5, this program can be set up. Setting range is from 12V to 15V for 1.0KW 12V model and 24V to 30V for 1.5KW 24V model. Increment of each click is 0.1V.
	Low DC cut-off voltage	1.6KW 24V default setting: 10.0V
29		If self-defined is selected in program 5, this program can be set up. Setting range is from 10.0V to 12.0V for 1.0KW 12V model and 20.0V to 24.0V for 1.5KW 24V model. Increment of each click is 0.1V. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected.
30	Battery equalization	Battery equalization Battery equalization disable (default) 30 EdS
		If "Flooded" or "User-Defined" is selected in program 05, this program can be set up.

		1.0KW 12V default sett	ing:14.6V	
31	Battery equalization voltage	1.5KW 24V default setting: 29.2V		
		Setting range is from 12V to for 1.5KW 24V model. Incr	15V for 1.0KW 12V model and 24V to 30V rement of each click is 0.1V.	
33	Battery equalized time	60min (default) 33 60	Setting range is from 5min to 900min. Increment of each click is 5min.	
34	Battery equalized timeout	120min (default) 34 120	Setting range is from 5min to 900 min. Increment of each click is 5 min.	
35	Equalization interval	30days (default) 35 30d	Setting range is from 0 to 90 days. Increment of each click is 1 day	
		BAREN	Disable (default) 36_RdS	
36 Equalization activated immediately		If equalization function is enabled in program 30, this program can be set up. If "Enable" is selected in this program, it's to activate battery equalization immediately and LCD main page will shows "C9". If "Disable" is selected, it will cancel equalization function until next activated equalization time arrives based on program 3 setting. At this time, "C9" will not be shown in LCD main page.		

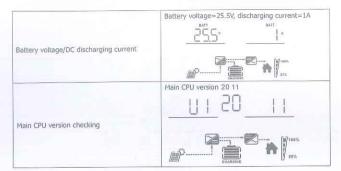

5.4 Display Setting

The LCD display information will be switched in turns by pressing "Up" or "DOWN" key. The selectable information is switched as below order: input voltage/output voltage, input frequency, PV voltage, PV input current, PV input power, charging current, charging power, battery voltage, output frequency, load percentage, load in VA, load in Watt, DC discharging current, main CPU Version.

Selectable information	LCD display
Input voltage/Output voltage (Default Display Screen)	Input Voltage=230V, output voltage=230V
Input frequency	Input frequency=50Hz
PV voltage	PV voltage=100V
PV current	PV current = 2.5A PV current = 2.5A OUTPUT OUTPUT
PV power	PV power = 500W

5.5 Operating Mode Description

Operation mode	Description	LCD display
Standby mode / Power saving mode Note: *Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery without AC output. *Power saving mode: If	No output is supplied by the unit but it still can charge batteries.	Charging by utility and PV energy. Charging by utility. Charging by utility.
Prower saving mode: If enabled, the output of inverter will be off when connected load is pretty low or not detected.		Charging by PV energy. On the state of the
Fault mode Note: *Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	PV energy and utility can charge batteries.	Charging by utility and PV energy. Charging by utility. Charging by PV energy. Charging by PV energy. No charging.

Operation mode	Description	LCD display
	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by utility and PV energy.
Line Mode	The unit will provide output	Charging by utility.
	power from the mains. It will also charge the battery at line mode.	If "solar first" is selected as output source priority and solar energy is not sufficient to provide the load, solar energy and the utility will provide the loads and charge the battery at the same time.
		Power from battery and PV energy.
Battery Mode	The unit will provide output power from battery and PV power.	PV energy will supply power to the loads and charge battery at the same time.
		Power from battery only.

5.6 Battery Equalization Description

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

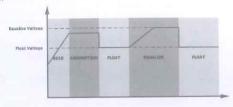

· How to Apply Equalization Function

You must enable battery equalization function in monitoring LCD setting program 30 first. Then, you may apply this function in device by either one of following methods:

- 1. Setting equalization interval in program 35.
- 2. Active equalization immediately in program 36.

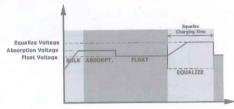

When to Equalize

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active immediately, the controller will start to enter Equalize stage.

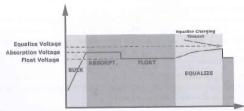

· Equalize charging time and timeout

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

5.7 Fault Reference Code

Fault Code	Fault Event	Icon on
01	Fan is locked when inverter is off.	
02	Over temperature	[DZ]_
03	Battery voltage is too high	[D3] -
04	Battery voltage is too low	[04]_
05	Output short circuited or over temperature is detected by internal converter components.	(DS)—
06	Output voltage is too high.	(06)-
07	Overload time out	
08	Bus voltage is too high	[08]
09	Bus soft start failed	[D9] _
51	Over current or surge	51-
52	Bus voltage is too low	[52]_
53	Inverter soft start failed	[53]_
55	Over DC voltage in AC output	JSS-
57	Current sensor failed	.[57]—
58	Output voltage is too low	(58)-
59	PV voltage is over limitation	.59-

5.8 Warning Indicator

Warning Code	Warning Event	Audible Alarm	Icon flashing
01	Fan is locked when inverter is on.	Beep three times every second	
04	Low battery	Beep once every second	<u> </u>
07	Overload	Beep once every 0.5 second	☐] A M Section 22%
10	Output power derating	Beep twice every 3 seconds	
15	PV energy is low.	Beep twice every 3 seconds	[15]4
E 9	Battery equalization	None	[E9]

6 CLEARANCE AND MAINTENANCE FOR ANTI -DUST KIT (Optional)

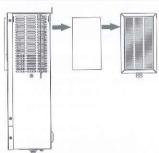

6.1 Overview

Every inverter is already installed with anti-dusk kit from factory. Inverter will automatically detect this kit and activate internal thermal sensor to adjust internal temperature. This kit also keeps dusk from your inverter and increases product reliability in harsh environment.

6.2 Clearance and Maintenance(option)
Step 1: Please remove screws as below.

Step 2: Then, dustproof case can be removed and take out air filter foam as shown in below chart.

Step 3: Clean air filter foam and dustproof case. After clearance, re-assemble the dust-kit back to the inverter.

NOTICE: The anti-dust kit should be cleaned from dust every one month.

Table 4 General Specifications

INVERTER MODEL	1.0KW-12V	1.5KW-24V
Safety Certification	CE	
Operating Temperature Range	-10°C to 50°C	
Storage temperature	-15"C~ 60"C	
Humidity	5% to 95% Relative Humidity (Non-condensing)	
Dimension (D*W*H), mm		286X240X91
Net Weight, kg	3	3.5
